

## Corporate Profile

*Energyfocus* is an Adelaide based consulting organization specializing in the field of Energy and Environmental Management. We provide clients with enhanced financial and engineering management outcomes and services in order to:

- ✚ Achieve sustainable energy cost savings
- ✚ Better understand and manage energy usage, electrical demand and associated costs
- ✚ Reduce greenhouse gas emissions and improve energy conservation efforts

### ***Our Business Offering Includes:***

- ✚ Act as the intermediary in the brokering of energy supply agreements
- ✚ Energy efficiency reviews and auditing in accordance with AS/ANZ 3598:2000
- ✚ Building Greenhouse ratings – National Australian Built Environment Rating System (NABERS)
- ✚ Carbon footprinting
- ✚ Environmental audits and management
- ✚ Development and project management of sustainable energy minimization programs
- ✚ Measurement and verification of energy conservation outcomes
- ✚ Internal air quality monitoring and investigations
- ✚ Historical energy data analysis, forecasting and account validation in association with a certified Meter provider and Meter Data Agency
- ✚ Energy account validation and network tariff optimization
- ✚ Building Management System performance and energy efficiency optimization
- ✚ Power factor correction analysis
- ✚ Power quality auditing
- ✚ Building tenant sub-metering reading, reporting and administration
- ✚ New and existing building energy efficiency modelling

*Energyfocus* has extensive energy auditing and management experience nationally across varied market segments.

These include

- ✚ Retail,
- ✚ Commercial,
- ✚ Education,
- ✚ Defence,
- ✚ Industrial and Processing,
- ✚ Health and Aged Care

*Energyfocus* possess the essential instrumentation and software necessary for performing detailed energy minimization and audit investigations to the highest standard and accuracy.

*Energyfocus* offers a holistic approach to sustainable energy minimization and management initiatives, and has the experience and resources to provide the following phase considered as intrinsic components of the overall process:

- ✚ Energy auditing and investigation
- ✚ Developing a financial investment model and determining viability
- ✚ Consultation with providers of Energy Conservation measures (ECM's)
- ✚ Project management of the ECM implementation
- ✚ Ongoing management to ensure sustainability of the ECM's

The extent of services provided by Energyfocus may be tailored to the client's specific requirements and the flexibility for Energyfocus to enter, leave and re-enter the process throughout the various phases is clearly an option.

As an Energy Management company Energyfocus is unique by way of its comprehensive offering and its ability to work with a client in the development of a sustainable energy minimization and management program to satisfy the financial and funding criteria.

*Energyfocus* has built and maintained a sound track record in reducing the cost of energy to an organization and improving the overall performance of building services. This has the flow on effect of reducing Greenhouse gas Emissions, and accordingly improving the Greenhouse rating for commercial building.

### ***In Summary***

**The pathway to reducing the cost of energy to your organization commences at the investigation, audit, and feasibility phases and concludes at the measurement, verification and management phases.**

***Energyfocus* has the experience and expertise to work with you through this process with the desirable outcomes of:**

- ✚ **A reduction in the cost of energy consumption and associated costs**
- ✚ **Improved operational efficiencies and reduced maintenance costs**

**The desired outcomes of an Energy Minimization and Management program is achieving peace of mind you are paying the absolute minimum for your cost of energy whilst simultaneously reducing Greenhouse emissions**
